About us

Since 1997 KCN GmbH is working in the field of coating. This makes us one of Germany's longest and most experienced users in the plastic coating segment.

Even after all these years, we are still enthusiastic about the technology as well as the material. Coming a long way from the first project - coating of loudspeaker cabinets to the most recent project - anti-slip floors, we continuously find new challenges.

Not easily impressed - the 3 raw materials in coating: Polyurethane, Polyurea and Hybrid

The coating is exposed daily to adverse conditions and tough usage - no cause for us to panic. Our coating technology is applied in various fields such as: construction, industry, craft, vehicle, truck anti-slip flooring, marine, agriculture, forestry, food transport.

There is no such thing as impossible - the application possibilities

The application possibilities of KCN coating are almost unlimited. Whether varnish, metal, wood, concrete, fiberglass or polystyrene, the foundation does not matter. Because of the direct application and immediate drying within seconds, the application is independent of shape.

Super Strong - a second skin

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 710968.
