The seamless coating of KCN

**The easy way to clean**

**The universal coating in the food industry**

# Universal coating in the food industry

## Problem zone stowage space

wasserdicht

extrem dehnbar

leicht zu reinigen

bricht nicht

Säureresistent

Lebensmittel transport

Lösungsmittel frei

Geräuschdämmend

Naht-/Fugenlos

Abriebfest

The coating of KCN has no seams or joints. This allows the interior to be sanitized easily and quickly.

Whoever delivers food is obliged by law to provide adequate hygiene. Vehicles delivered directly from the factory are not suitable, because of joints, cracks and gaps. Food scraps fall down, bacteria, mold and unsavory odors are the result.

A high-quality substructure and a detail upgrading are the basis for the KCN coating, which is applied seamlessly by a special injection molding process. The cargo space cannot be subvert, is waterproof, and easy to clean. The treatment with strong chemicals and steam cleaner is no problem for the coating. Other benefits include: permanently impact and abrasion resistant, solvent-free.

We offer complete solutions for your upgrading, such as: loading ramps, ventilation, tools for load securing and more.

From the floor via the central stringer to ceiling - we are an advisory capacity.

**Super strong – a second skin.**
